

AI-Powered Multilingual Drupal

Don - Evolving Web - May 2

Session Recordings

Speakers, hit the rec/red button!

Attendees, remind speakers about the record button!

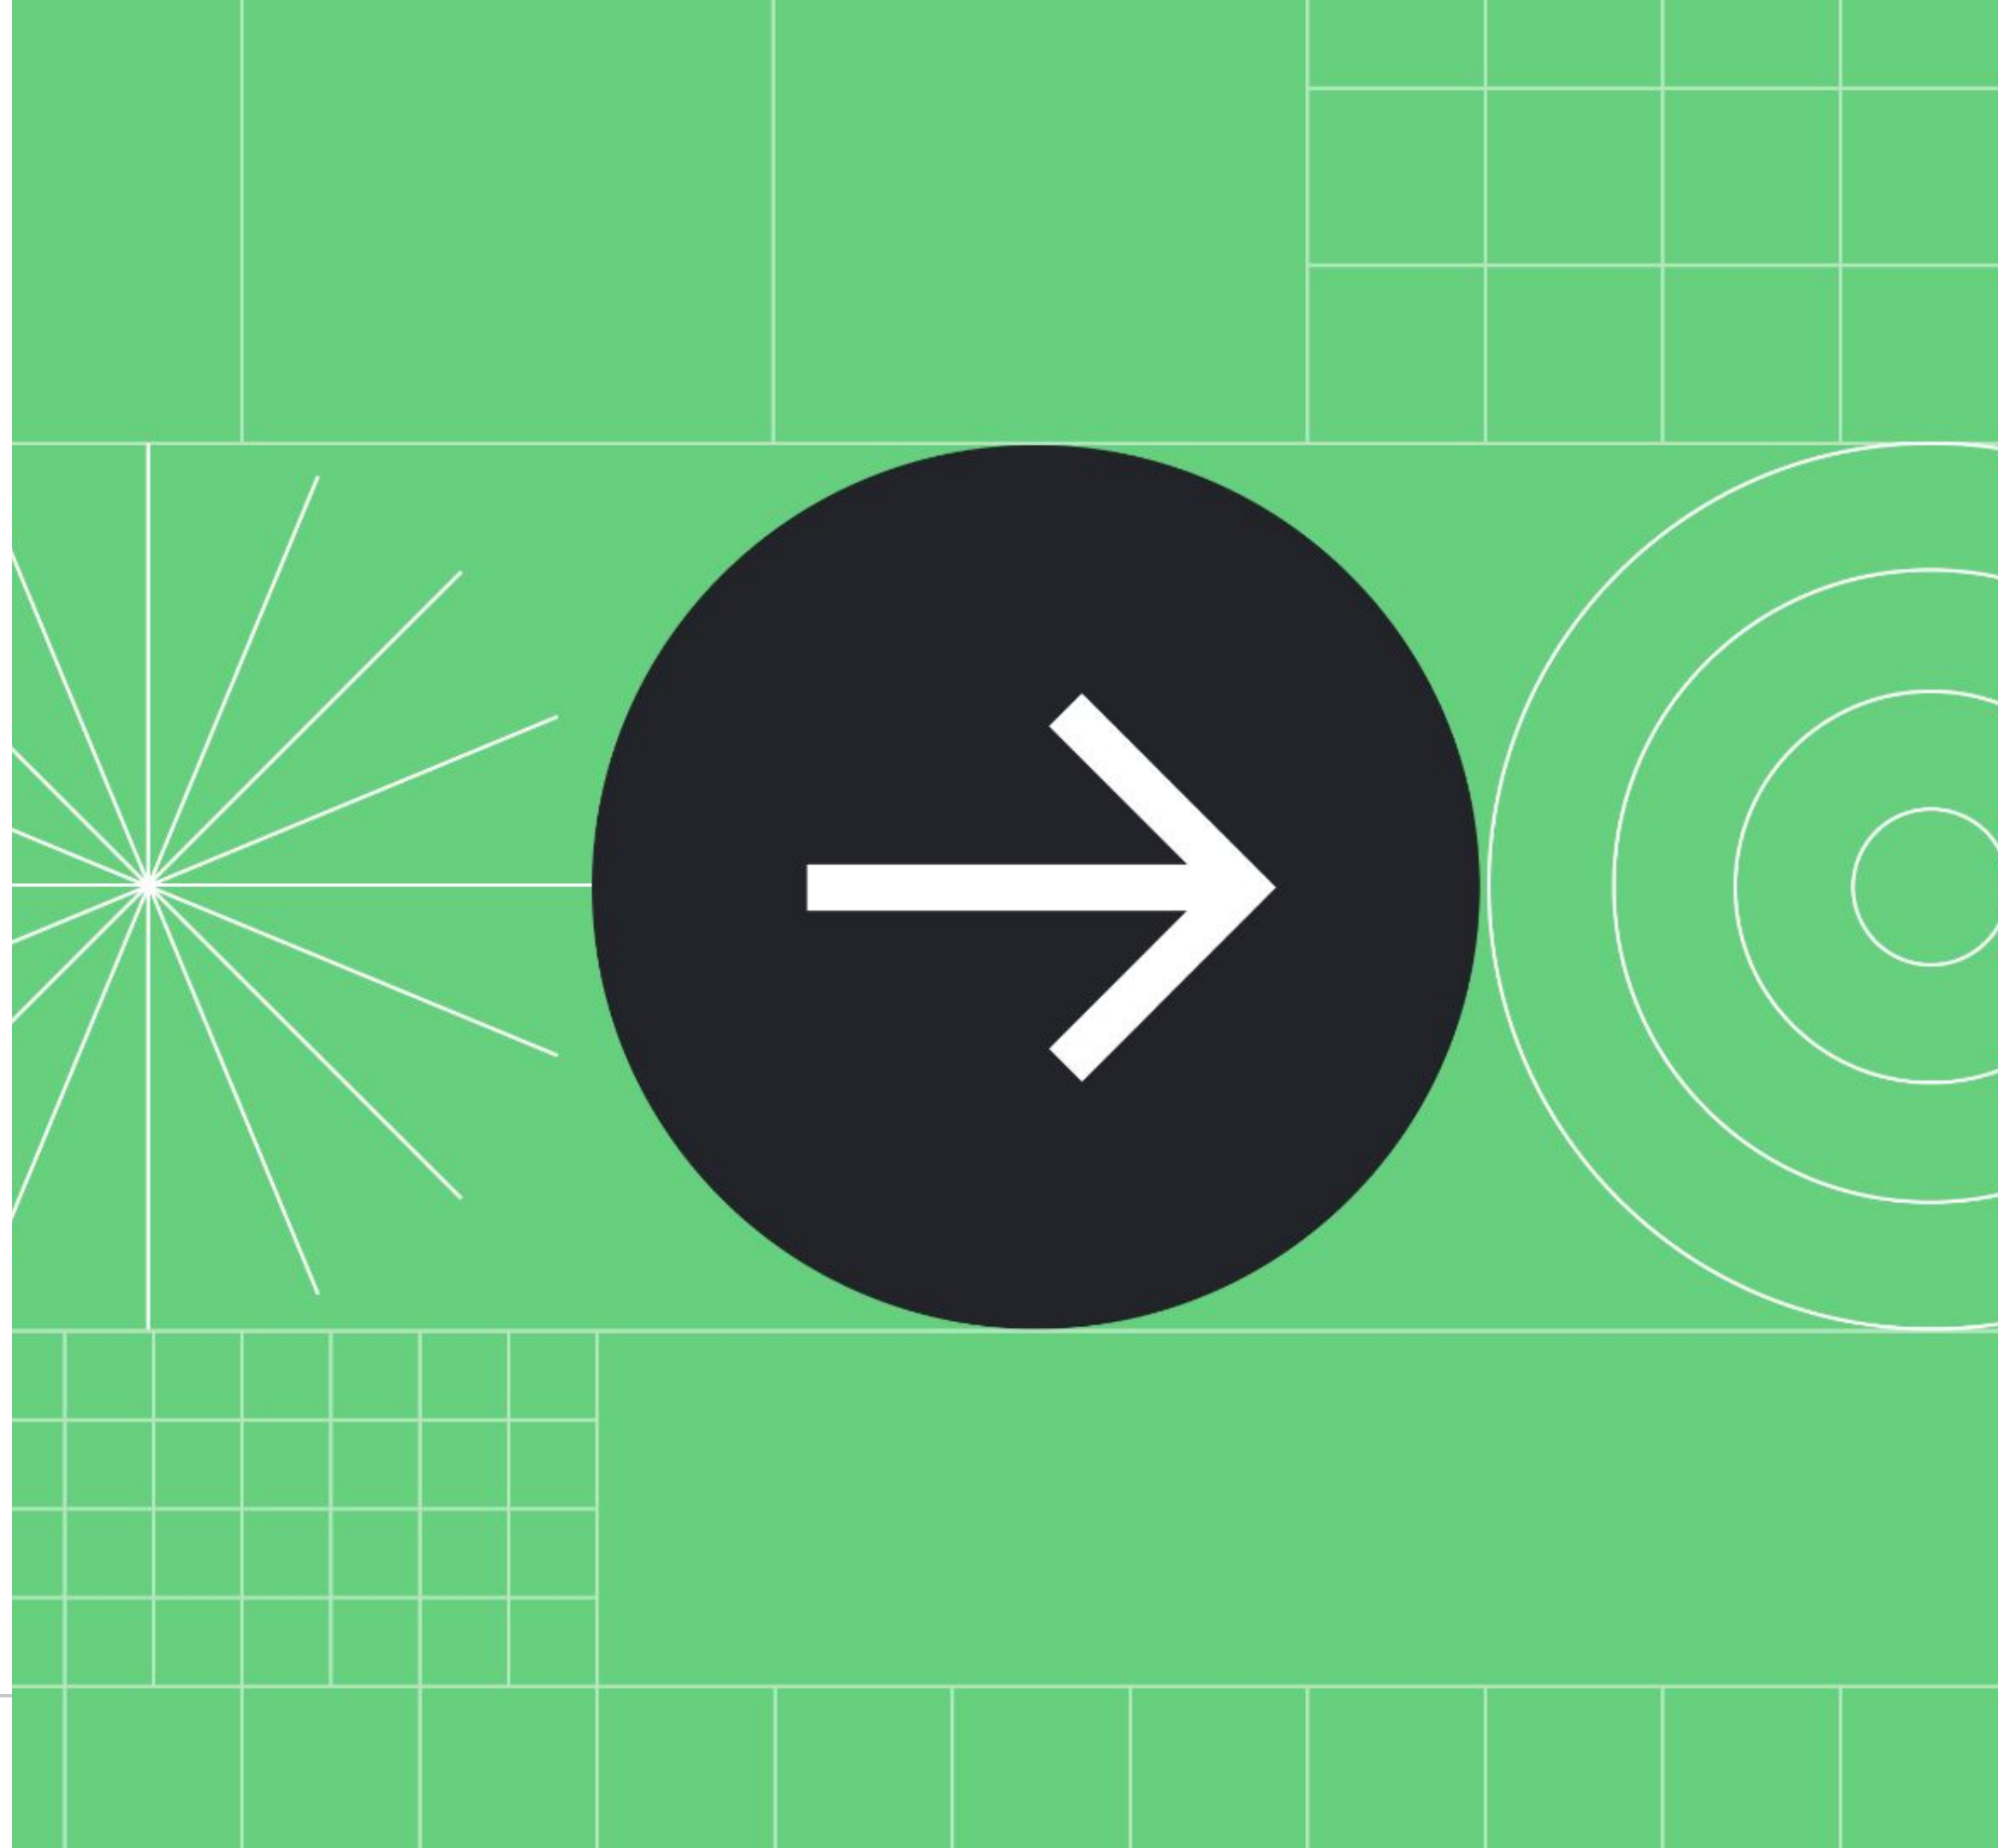

All recorded sessions will be available online on the DrupalYOW youtube channel.

Agenda

1. Challenges and scenarios
2. Things to know and need
3. Demo - Simple translation
4. Demo - Bulk translation
5. Demo - Continuous translation
6. Demo - Manual translation

About the AI Translator Tool

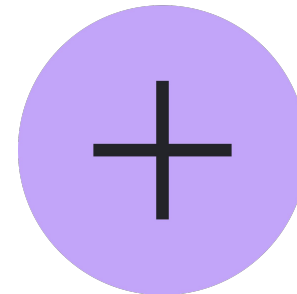

Scenarios

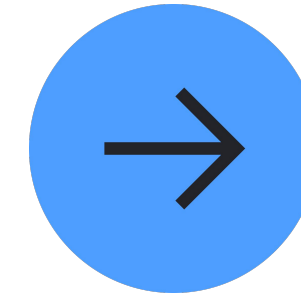

Translate the whole site

You need to translate your new website quickly and accurately, including config and interface texts

Add a new language

You'd like to offer your website in an additional language without creating significantly more work

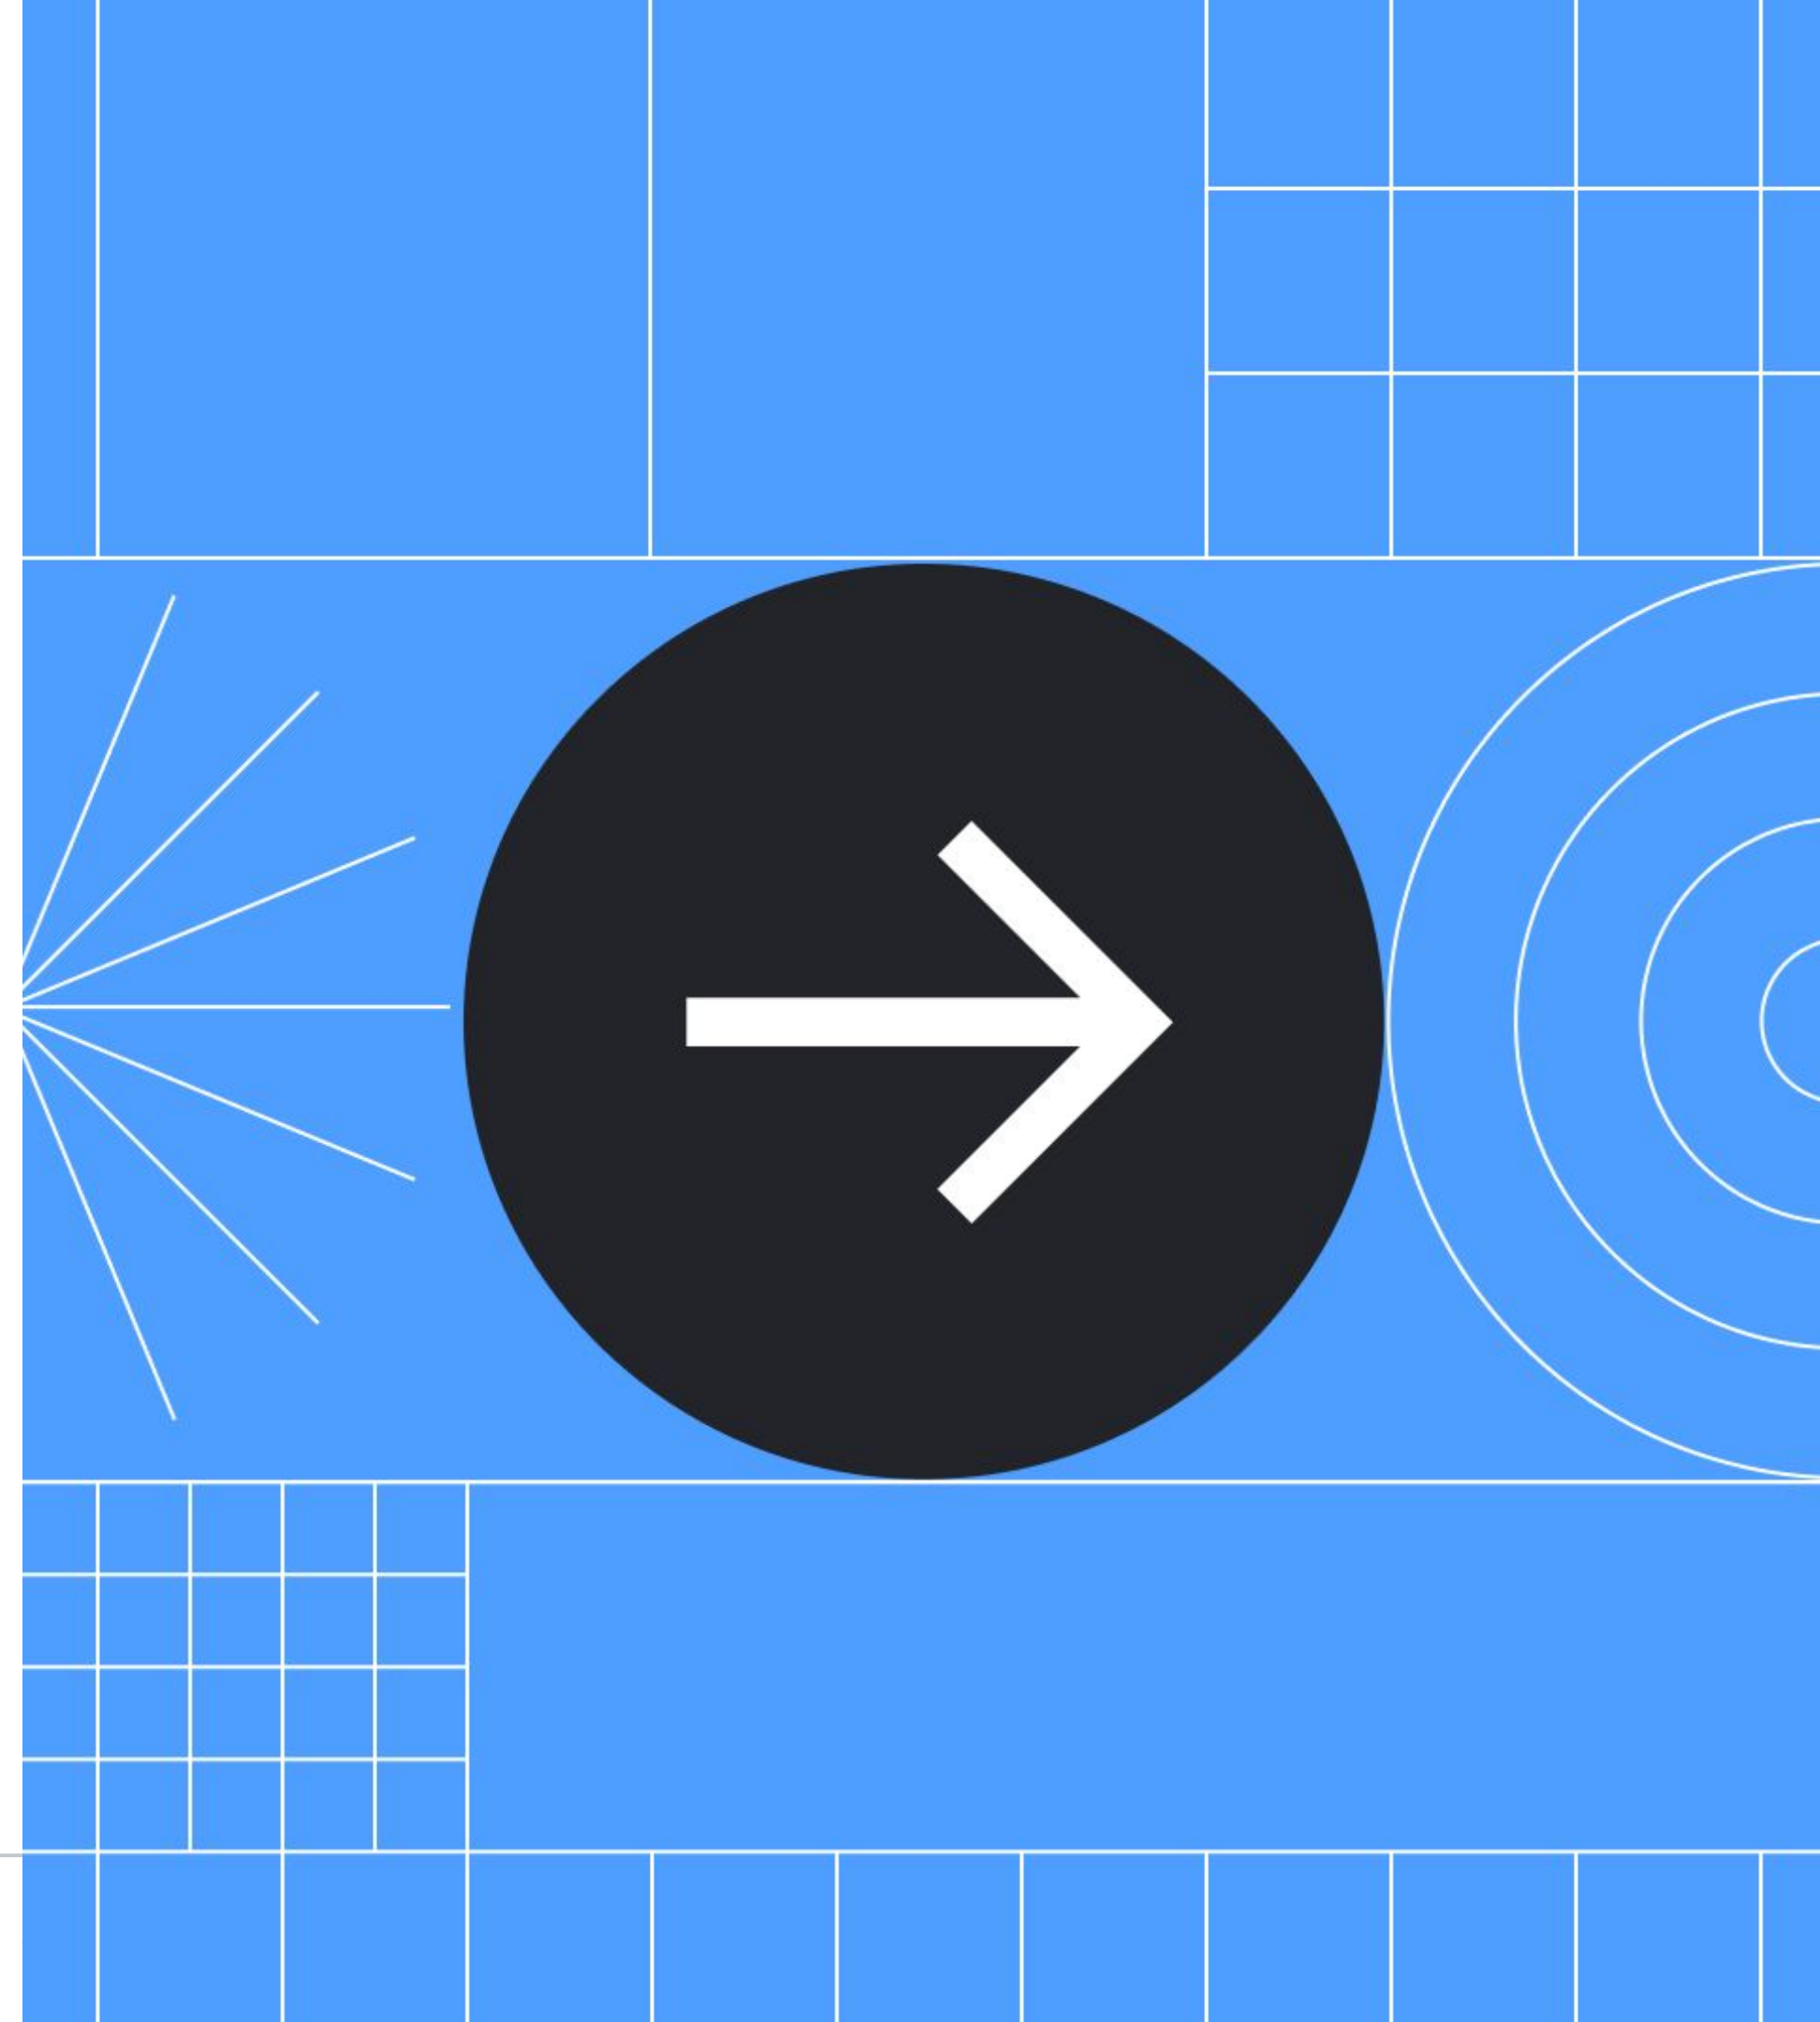

Ongoing content updates

Content updates on the primary language site create additional translation work to ensure that the other language sites are updated in a timely manner

Challenges

- **Complex workflow:** Translation processes, tracking changes, and coordinating with translators can be a complex process
- **Configuration and UI translation:** Translating non-content elements like field labels and interface text adds considerable effort and are sometimes ignored early in the project
- **Scalability:** As websites grow, managing translations for multiple pages and languages becomes difficult to scale efficiently
- **High-cost:** Engaging human translators for all content and interface elements can be expensive

What we want

- **Fast Translations:** Save time and launch your website on schedule by reducing the required manual work.
- **Simple Content Updates:** Updates in one language can be automatically translated and ready for you in every other language as well.
- **Cost-Effective Solution:** Reduces the need for manual translations by automating the process.
- **No Content Left Behind:** Ensure that alt text, menu items, labels, and interface texts are included

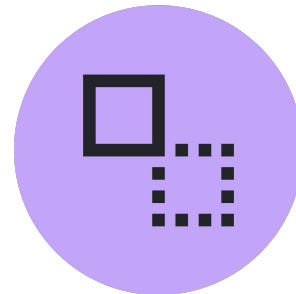

What we should know

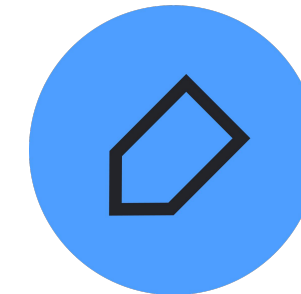

Content

- Pages, blocks, articles, terms

Config

- Field labels, view names, menus

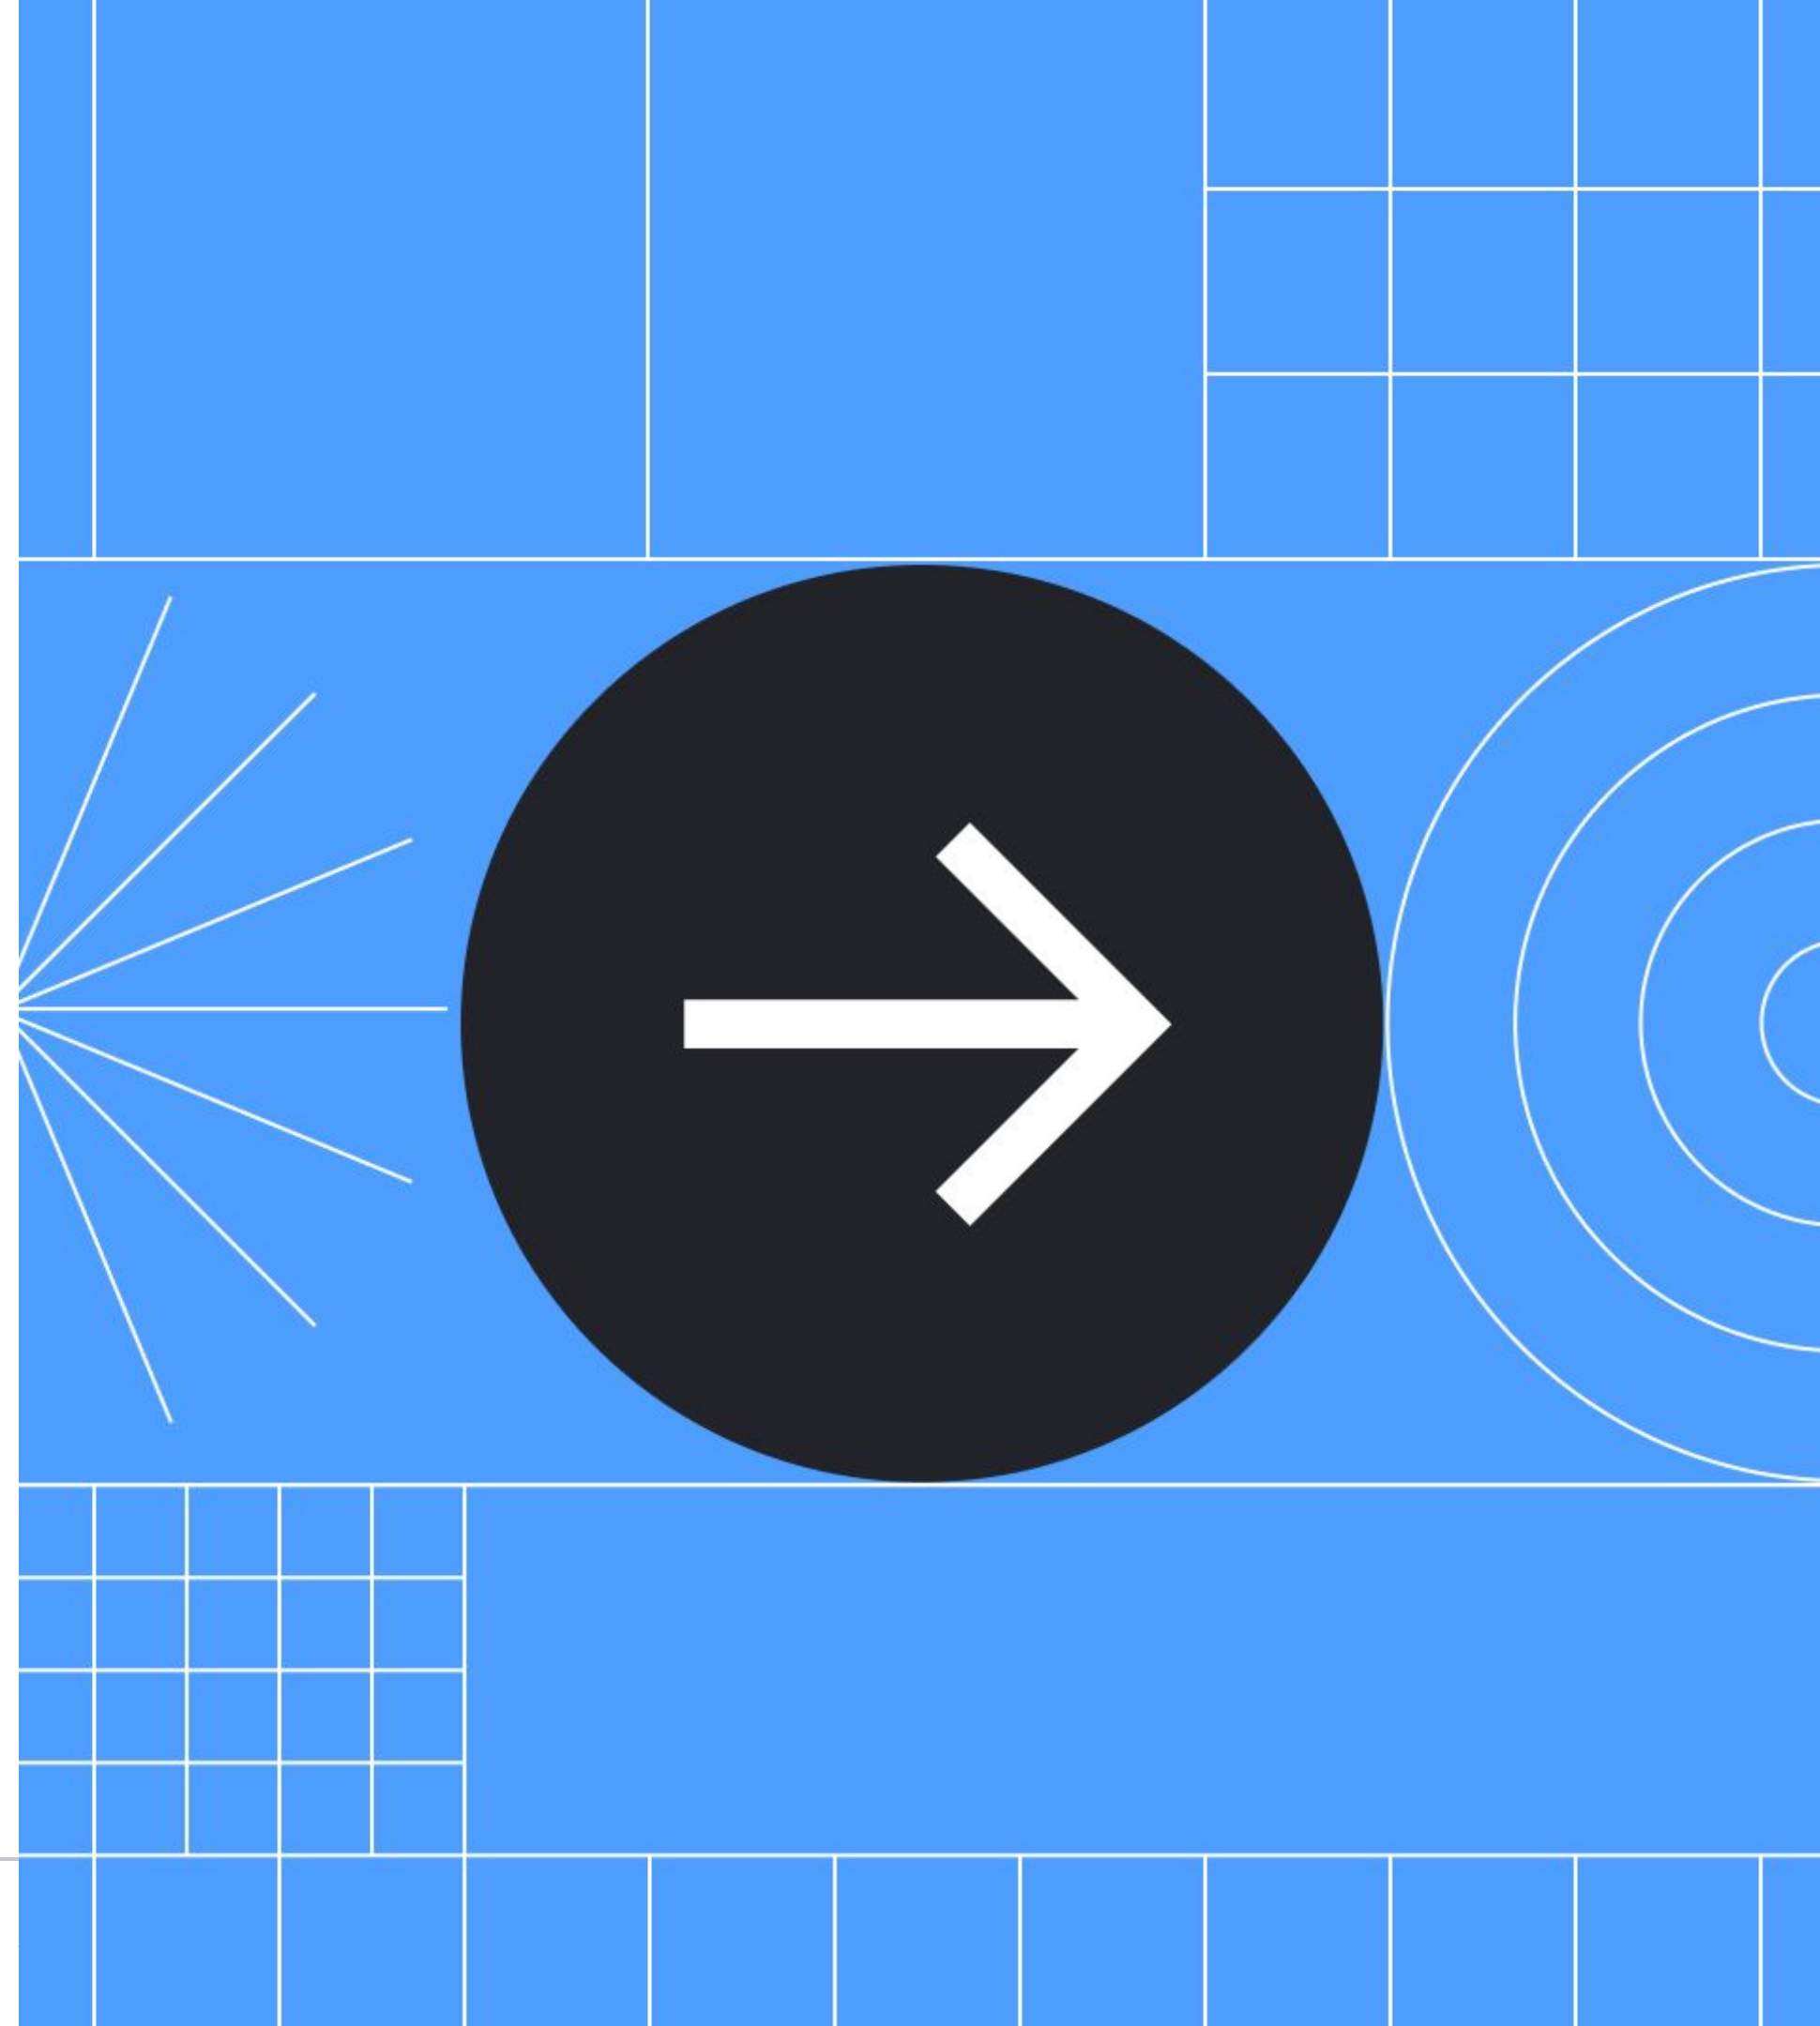

Interface

- Button labels, system messages, template texts

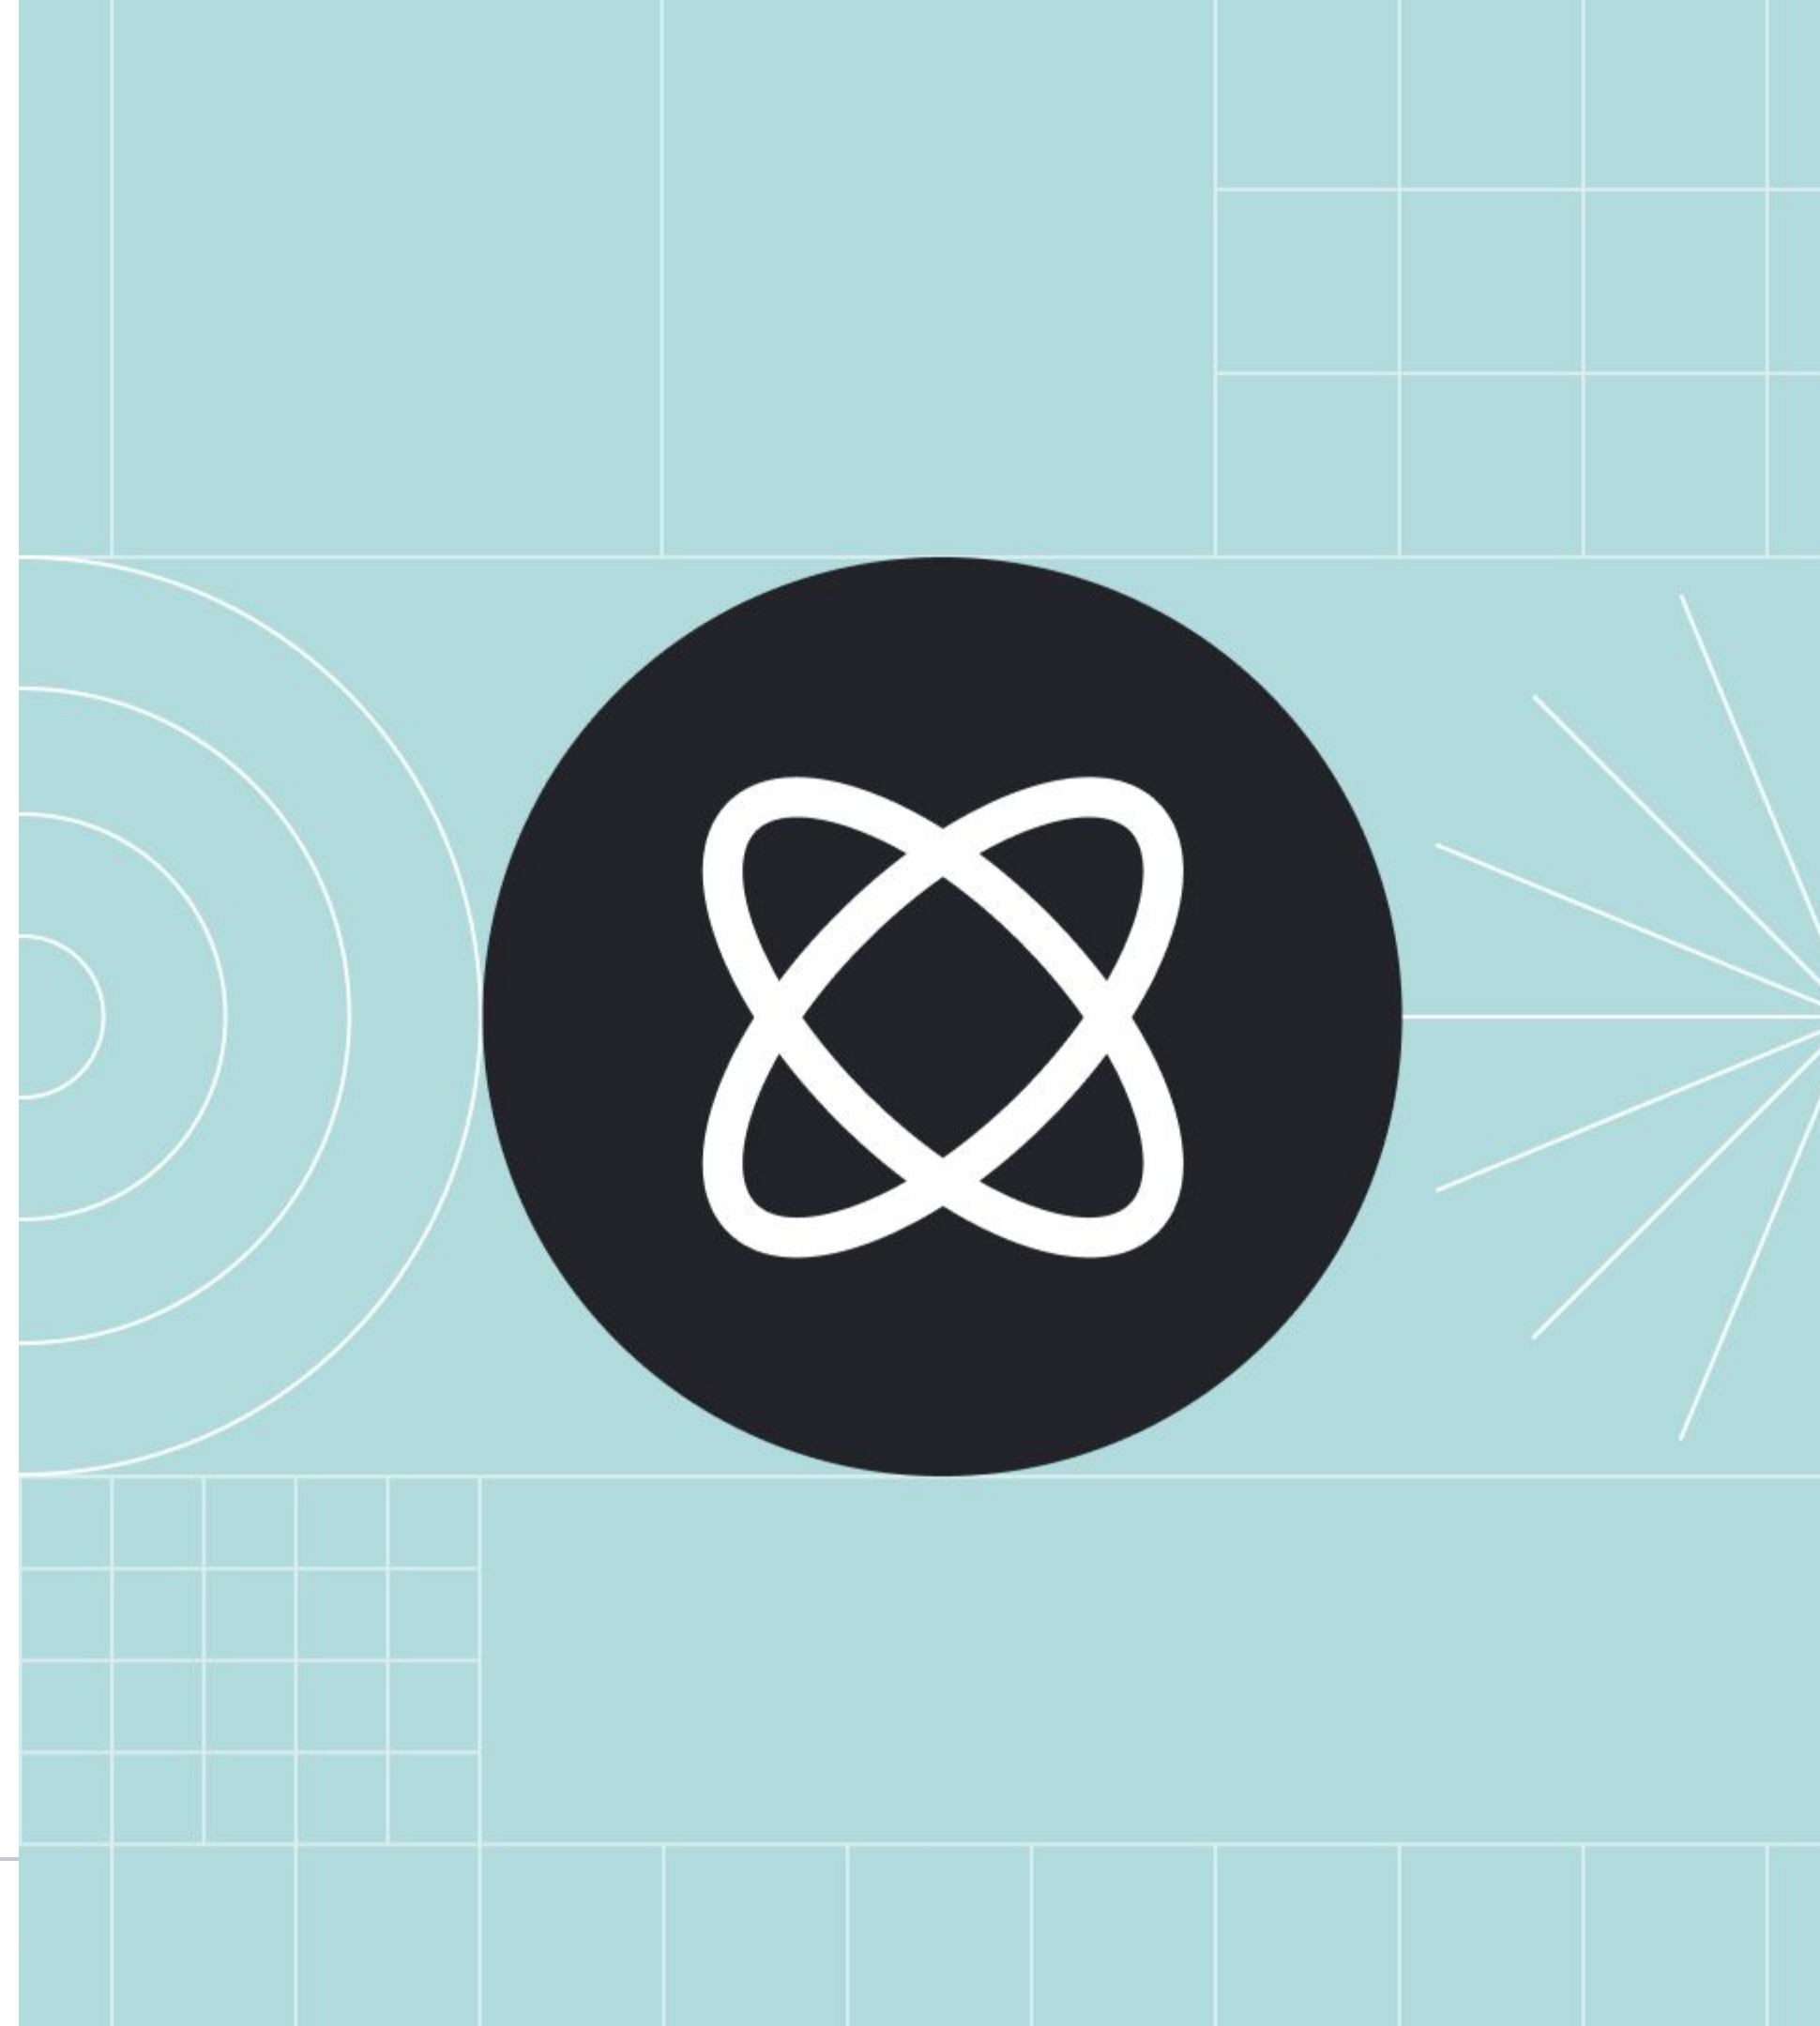

What we need

- [Translation Management Tool](#)
 - [DeepL](#)
 - [Google Translate](#)
 - [Microsoft Translator](#)

Demo

- Translating a Single Content Automatically
- Translating with Review
- Bulk Translation
- Continuous Translations
- Translating Configurations and Interface Texts
